It's easy to search Wikibooks by topic, and there are separate sections for recipes and childrens' texbooks. You can download any page as a PDF using a link provided in the left-hand menu, but unfortunately there's no support for other formats. There's also Collection Creator - a handy tool that lets you collate several pages, organize them,

File Type PDF

Businessobjects

Enterprise Web

Application  
Deployment Guide

and export them together (again, in PDF format). It's a nice feature that enables you to customize your reading material, but it's a bit of a hassle, and is really designed for readers who want printouts. The easiest way to read Wikibooks is simply to open them in your web browser.

Pure web server is a web server that serves static html content (Apache is the classic one, the trendy one at the moment is nginx).

To prepare static content you need to run wdeploy on the command line using apache as the webapp server. Have a look at the [BI4 INSTALL PATH]/SAP BusinessObjects Enterprise XI 4.0/wdeploy/conf/config.apache

Enterprise Deployment Pattern Overview. Here we start to distribute the components to separate servers in order to improve performance and optimise licensing. This pattern is sometimes described as a 3 tier deployment where we have the components deployed as follows.

First Tier - Web Application Server. A Web Application Server that hosts the InfoView

With SAP  
Application  
Deployment Guide  
BusinessObjects BI 4.2  
SP03 and later, there is  
a means to suppress  
automatic deployment  
of web applications  
during the installation  
in case of multi-  
package BI landscape  
update. As an  
administrator updating  
your BI landscape, you  
can choose to “Deploy  
Web applications Now”  
or “Deploy Web  
applications Later”.
