Physiological Basis of Aging and Geriatrics 4, Timiras ...

Extensively revised and updated to reflect the current state of knowledge in the study of aging, Physiological Basis of Aging and Geriatrics offers a complete profile of the aging process at all levels, from molecules and cells to demography and evolution.

Physiological Basis of Aging and Geriatrics, 4th edition ...

The causes of aging are uncertain; current theories are assigned to the damage concept, whereby the accumulation of damage (such as DNA oxidation) may cause biological systems to fail, or to the programmed aging concept, whereby internal processes (such as DNA methylation) may cause aging.

Ageing - Wikipedia

Telomeres are highly repetitive DNA sequences located at the end of chromosomes, and telomere length is associated with cell age. As cells divide, telomere length gets progressively shorter until eventually, proliferation stops entirely. Such cells, which have ceased dividing, are called senescent.
