Quick Guide Oracle Data Guard

An Oracle database operates in one of two roles: primary or standby. Using Data Guard, you can change the role of a database using either a switchover or a failover operation. A switchover is a role reversal between the primary database and one of its standby databases. A switchover ensures no data loss. This is typically done for planned maintenance of the primary system.

Introduction to Oracle Data Guard

Oracle Data Guard is used for quick recovery between these sites. The primary site also has a secondary database for reporting and other uses. There are two approaches for this setup. Approach 1: Direct connections between on-premises and Azure, requiring open TCP ports on the firewall. ORACLE-BASE - Data Guard Physical Standby Setup Using the ...

Quick Guide Oracle Data Guard - amsterdam2018.pvda.nl

Oracle Data Guard consists of many components. In this post I'll explain about an environment that helped me understand how all the components work. This is a 12.1.0.2 (with APR 2018 PSU, so should be pretty stable)with a physical standby in a remote site.

Oracle Data Guard Explained - Step By Step - GotoDBA

Data Guard is Oracle 12c's true disaster protection technology. In it, you have a minimum of two databases, primary and standby. Data Guard has options for multiple standby sites as well as an active-active configuration. By active-active, it means both/all sites are up, running, and accessible. This is opposed to sites that have one active location and the others must be started up when they are needed.

Basics of Oracle 12c's Data Guard - dummies

Data Guard is an Oracle feature that primarily provides database redundancy. This is done by having a standby (physical copy) database, preferably in another location and on separate disk. This standby database is maintained by applying the changes from the primary database to it. Standby databases can be maintained with
