The lattice Boltzmann method discretizes this equation by limiting space to a lattice and the velocity space to a discrete set of microscopic velocities (i. e. $\vec{v} = (v_x, v_y)$). The microscopic velocities in D2Q9, D3Q15, and D3Q19 for example are given as:

In recent years, stylized forms of the Boltzmann equation, now going by the name of "Lattice Boltzmann equation" (LBE), have emerged, which relinquish most mathematical complexities of the true Boltzmann equation without sacrificing physical fidelity in the description of many situations involving complex fluid motion.

The evolution equation for n_i is $n_i(x, t+1) - n_i(x, t) = \frac{1}{\tau} (n_i - n_i^{\text{eq}}) + \mathcal{C}_i(n)$ (24) [154]. R. Benzi et al., The lattice Boltzmann equation: theory and applications where $\mathcal{C}_i(n)$ is the contribution of collisions involving products of the n_i s. Let us now consider $N_1(x, t)$, obtained as the ensemble average of the boolean $n_i(x, t)$.

We recall the origin of lattice Boltzmann scheme and detail the version due to D'Humières [8]. We present a formal analysis of this lattice Boltzmann scheme in terms of a single numerical infinitesimal parameter. We derive third order equivalent partial differential equation of this scheme. Both situations of single conservation law and fluid flow with mass and momentum conservations are ...

EGEE 520: Mathematical Modeling Lattice-Boltzmann Method

The Boltzmann equation or Boltzmann transport equation describes the statistical behaviour of a thermodynamic system not in a state of equilibrium, devised by Ludwig Boltzmann in 1872. The classic example of such a system is a fluid with temperature gradients in space causing heat to flow from hotter regions to colder ones, by the random but biased transport of the particles making up that fluid. In the modern literature the term Boltzmann equation is often used in a more general sense, referring

Lattice Boltzmann Method

A simple one dimensional lattice Boltzmann method to solve the time dependent Schroedinger equation. The method works by writing the Schroedinger equation as a continuity equation and an Euler equation as outlined in the introduction to Lattice Boltzmann.
